## Raw submission points

These are submission points that were lodged as part of an online submission. They have not been summarised.

Raw sub point number	Provision	Support/oppose	Decision sought	Reasons
S14.1	Policy P70: Minimising effects of rural land use activities.	Amend	<p>The time to do this submission is just not enough to put a well thought through response to such a massive document.</p> <p>Decision sought: Remove the need to plant or retire land if the discharge is acceptable, else come up with an appropriate treatment.</p>	<p>I agree that water quality is important and it is also important to determine the stream quality of each farm. The maps show many areas of steep land and therefore require land to be retired or planted. Our land has lots of steep areas mixed in with less steep and it is not possible to economically plant small pockets of land. The area is high and has high winds so planting is also only viable in protected areas. Income is enough to pay for rates and some fence maintenance and the land would have to be retired. I request current discharge quality to be determined before deciding on the action to maintain or improve.</p>
S14.2	Policy P73: Implementation of farm environment plans in priority catchments.	Amend	<p>Request to develop a specific outline of water quality tests specific to the farm then develop a plan to understand the causes. Then put a farm env plant together. Allow 5 years to do this.</p>	<p>There is just not enough time to put a decent quality response to you for such a massive document. In lieu of this, I am trying to put up some amendments that we could see to practically implement the objectives. We need to check the stream quality, risk areas of the farm under different weather conditions, then put a plan together. We need time to do this competently and cheaply as there is no profit in the farm to pay for consultants.</p>
